EDUCATION

University of Wisconsin - Madison

Master of Science in Computer Science | GPA: 3.83/4.0

01/2026 – 05/2027

Relevant Coursework – Algorithms, Machine Learning, Dynamic Programming, Software Engineering

Bachelor of Science in Computer Science and Data Science | GPA: 3.62/4.0

09/2022 – 12/2025

Relevant Coursework – App Development, UI/UX, Databases, Python Programming, Artificial Intelligence, Data Visualization, Statistics

Certifications – Google Data Analytics Professional Certificate, IBM Data Science Professional Certificate, UCSD Data Structures and Algorithms

Clubs – Badger Solar Racing Club, Race Strategy Team: modeled optimal racing lines and target speeds for real time driver strategy on race days

EXPERIENCE

Research Assistant

09/2025 – Present

Wisconsin School of Business

- Engineered a Qualtrics-integrated AI agent to execute shape generation and selection tasks from user prompts for 100+ participants.
- Built a low-latency Python, LLM, and JavaScript pipeline to translate natural language into geometric actions for performance scoring.
- Developed a multi-agent case simulation platform supporting 40+ concurrent students, 8+ role-based personas, and 12+ case studies, enabling students to interview stakeholders, unlock case files, and gather evidence for business recommendations.
- Built persona referral, document retrieval, and LLM-based report grading workflows to evaluate student submissions with automated feedback.

Frontend Developer Intern

05/2025 – 08/2025

ai-horizon.io

- Collaborated with other interns to design and develop the company website with 50+ responsive UI pages and 20+ custom animations.
- Integrated backend APIs to build dynamic blog and news pages, and developed an admin panel for real-time content management.
- Boosted page load speed by 18% through lazy loading and memoization in React. Built using the MERN stack.

Teaching Assistant

01/2025 – 05/2025

Wisconsin School of Business

- Prepared and graded lecture materials, assignments, projects and exams while clarifying concepts during office hours for 60+ students.
- Led weekly discussion sections on end-to-end ML model development, including data cleaning, model selection, feature transformations, hyperparameter tuning, model training and performance evaluations through real life case studies.

Machine Learning Intern

05/2024 – 08/2024

Reliance Jio

- Deployed a decision tree regression model to predict battery backup duration during power loss for data centers statewide with 91% accuracy.
- Processed daily updated operations data and applied data cleaning, grid search CV, VIF analysis and pruning to reduce model complexity.
- Presented improved maintenance scheduling and preventive measures for high risk sites to stakeholders, reducing system downtime by 15%.

Data and Networks Intern

05/2023 – 08/2023

NTT DATA

- Implemented Python scripts to configure and test new updates to a network setup supporting over 300 devices in a virtual environment.
- Deployed the ELK stack to efficiently process VM log data through Logstash and perform in-depth analysis of the data using Elasticsearch.
- Presented findings and suggested improvements through a dynamic Power BI dashboard and achieved 20% improvements to network speed.

PROJECTS

Iris – PostgreSQL | FastAPI | React | DigitalOcean

- Developed a Jira-style internal project management tool for DataCEVA, enabling client-specific ticket tracking through custom Kanban boards.
- Implemented Google and Slack authentication with separate employee and client workflows, dedicated views, and role-specific functionality.
- Integrated Slack APIs to tag tickets to workspaces and added AI-powered automated messages and emails, improving productivity by 16%.
- Engineered a project analytics dashboard to track time against targets and employee-level breakdowns, improving client billing accuracy by 35%.

Battle of Neighborhoods – Python | Power BI

- Analyzed Bangalore neighborhoods using the Foursquare API and K-means clustering to identify optimal restaurant locations.
- Built a Power BI dashboard ranking locations by foot traffic, competitor density, rental costs, and demographics for 7 prospective businesses.

Teeko AI – FastAPI | React

- Developed a web-based Teeko game with a dynamically adjustable AI opponent.
- Implemented successor-state generation, heuristic evaluation, and minimax depth control, enabling the AI to evaluate up to 4 future moves.

Memory Heap Allocator – C | Linux

- Built a memory allocator with best-fit allocation, explicit free list management, block splitting, and immediate coalescing.
- Used boundary-tag metadata, 8-byte alignment, and mmap/mprotect guard pages, to validate allocation, reuse, failure, and coalescing behavior.

SKILLS

Languages: Python, TypeScript, Javascript, SQL, R, MATLAB, Java

Frameworks: React, PyTorch, Scikit-Learn, TensorFlow, NumPy, Pandas, FAST API, Flask, Node.js, Express, Django

Tools and Platforms: Azure, Git, Power BI, Git, Docker, AWS, Linux, Jira

Databases: MySQL, PostgreSQL, MongoDB
